

DOMINATE F

A microbial brew adjuvant for stabilisation and fungal domination. Use with LMF and a microbial inoculum (Life 4/20) to produce exceptional brews for promoting growth and bio-balancing.

Benefits

- Produces a fungal dominated brew.
- Increases fungal count.
- Reduces contamination issues.
- Improves brew stability.
- Fungal brews are ideal for bio-balancing.

Typical Analysis w/v

- SG 1.2
- pH 4.4 - 5.4

Storage & Handling

- Storage & Handling Store in ambient conditions out of direct sunlight.
- SHAKE WELL BEFORE USE.
- This is not a microbial product but is used in the production of microbial brews. Immuno-compromised persons (e.g. those undergoing chemotherapy) should not handle or be exposed to microbial products. While handling, brewing and applying microbial products protective clothing, gloves and face masks should be worn. Avoid aerosols generated by aeration.

Brewing Instructions

All brewing equipment must be thoroughly cleaned before and after use (e.g. using Path-X at 100 mL/10 L). When using potentially contaminated water sources (e.g. dam water) treat water first using bleach (4 % available chlorine) at a rate of 50 mL per 100 L of water. Proportional amounts of bleach will be required if the available chlorine % varies. Aerate for at least one hour, until the smell of chlorine dissipates.

Application Rates

Use 1 L Dominate-F together with 1 L LMF (Liquid Microbe Food) per 100 L brew. Refer to inoculums for specific brewing instructions. Note: Dominate F should be used in conjunction with LMF.

Important

- This is a brewing adjuvant, not a microbial inoculum.

Packaging

- 1 L
- 20 L
